D. pteronyssius 98 kD mite allergen protein (map) PDerp98-509.

```
Dermatophagoides, designated Der HWW-map protein, and its related nucleic acid. The Der HWW-map protein is useful for eliciting an immune response against Der HWW-map protein. The protein or a reagent comprising a non-troteinaceous epitope is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for desensitising a host animal to an allergic response to a mite. The DNA and protein can be used in the catection of anti-Der HWW-map antibodies in animal fluids, and inhibition of immunoglobulin (Ig)E or Der HWW-map protein activity associated with a disease. Antibodies that bind to Der HWW-map are useful for inhibiting binding of proteins to IgE, to prevent immunosomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity. Sequences ANU96314-AAU96312. represent Der HWW-map pilnention
mite allergenic protein isolated from Dermatophagoides, designated HMW-map protein, useful as a vaccine for treating mite allergy.
                                                                                                                                              an isolated mite allergenic protein
                                                                                      Claim 12; Page 144-146; 161pp; English.

This sequence represents Dermatophagoides pteronyssius mite allergen protein (map) PDerp98-509. PDerp98-509 has a molecular weight of 98 kD, comprising 509 amino acids, and has a high degree of homology with the D. farinae 98 kD allergen, mapB (AAX5253). Nucleic acid molecules encoding PDerp98-509 were isolated from a D. pteronyssius cDNA library by PDerp98-509 were isolated from a D. pteronyssius cDNA library by map (MAW-map) composition. Mite allergenic proteins and peptides, and nucleic acids encoding them, may be used in therapeutic compositions to moleic acids encoding them, may be used in therapeutic compositions to moleic allergens. Animals confifty an animal's hypersensitivity reaction to mite allergens. Animals that may be treated include mammals and birds, especially felines, canines, equines, humans, other pets, and work or domestic animals. The proteins and peptides can also be used to raise antibodies, which have a variety of potential uses. For example, they can be used as vaccines to passively immunise animals against dust mite the recover desired dust mite allergens from a mixture of proteins. (Updated on 06-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DPYQDDNHNSWEKRGYERFINNLRLKNPELTTMISLGGWYEGSEKYSDMAANPTYRQQFIQ

The invention relates to an isolated mite allergenic protein of Dermatophagoides, designated Der HWM-map protein, and its related nucleic acid. The Der HWM-map protein is useful for eliciting an immune response against Der HWM-map protein. The protein or a reagent comprising a non-proteinaceous epitope is useful for identifying an animal (e.g., dog, act) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for desensitising a host animal the allergic response to a mite. The DNA and protein can be used in the allergic response to a mite. The DNA and protein can be used in the detection of anti-Der HWM-map antibodies in animal fluids, and inhibition of immunoglobulin (Ig)E or Der HWM-map protein activity associated with a disease. Antibodies that bind to Der HWM-map are useful for inhibiting
                                                                                                                              362

Dermatophagoides, designated Der HWW-map protein, and its related nucleic acid. The Der HWW-map protein is useful for eliciting an immune response of against Der HWW-map protein or a reagent comprising a non-proteinaceus epitope is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for desensitising a host animal to an allergic response to a mite. The DNA and protein can be used in the allergic response to a mite. The DNA and protein cativity associated with a confirmance of immunoglobulin (Ig)E or Der HWW-map protein activity associated with a disease. Antibodies that bind to Der HWW-map are useful for inhibiting confirming of proteins to IgE, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens formation, thus against mite allergen hypersensitivity. The present sequence is that of the mosquito Anopheles gambiae chitinase. This protein is used in claimed fusion proteins of the invention. Such this on proteins comprise a translocating moiety and a toxic moiety, where the translocating moiety is a plant protein (e.g. a lectin) capable of acting as a carrier to translocate the toxic moiety across the gut wall of a plant pathogen, and the toxic moiety is an insect-derived peptide or protein capable of causing deleterious effects on growth, development, reproduction or mortality in pest insects. Suitable insect peptides and proteins include allatostatins, chitinase, diuretic hormone and their metabolites and analogues. Polymucleotides encoding the fusion protein, vectors, host cells and transgenic plants that are resistant to disease degradation in the insect gut

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               502
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      542
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          enzyme;
insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequence (ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           isolated nucleic acid detection reagent for detecting 1000 or more
es from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SKNPMRIVCYVGTWSVYHK-VDPYTIEDIDPFKCTHLMYGFAKIDEYKYTIQVFDPYQDD

                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is that of prawn (Penaeus japonicus) chitinase. This protein can be used in claimed fusion proteins of the invention comprising a translocating moiety and a toxic moiety, where the translocating moiety is a plant protein (e.g. a lectin) capable of acting as a carrier to translocate the toxic moiety across the gut wall of a plant pathogen, and the toxic moiety is an arthropod-derived peptide or protein capable of causing deleterious effects on growth, development, reproduction or mortality in pest insects. Suitable arthropod peptides and proteins include allatostatins, chitinase, diuretic hormone and their metabolites and analogues. Polynuclectides encoding the fusion protein, vectors, host cells and transgenic plants that are resistant to disease are also provided. The fusion protein is target-specific, and resists degradation in the insect gut. (Updated on 23-OCT-2003 to standardise OS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       488
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 175

          An epidermal and gut chitinase (AAW01824) of Manduca sexta is encoded by cDNA clone 201 (AAT62557), isolated from a day-6 fifth instar whole larva cDNA library. The cDNA can be inserted into a vector for host expression of the chitinase protein, and may be utilised to control a population of insect pests. A recombinant baculovirus vector is provided for this purpose, as well as a transgenic tobacco plant that shows increased resistance to tobacco hornworm. Recombinant chitinase may also be expressed in host cells or larvae for subsequent purification and use as a biocide. The insect chitinase is expected to be more potent as an insect control agent than chitinases from other sources
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         252

-!- FUNCTION: Degrades chitin and chitotriose. May participate in the
defense against mematodes and other pathogens. Isoform 3 has no
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DOLYMORPHISM: A 24 bp duplication in exon 10 leads to the activation of an alternative splice site and the production of an inactive procein. About 6% of the population are deficient for CHIT1 activity, while 35% are carriers and show reduced enzyme levels. People with CHIT1 deficiency appear perfectly healthy. MISCELLANEOUS: Patients with type I Gaudher disease (GD 1) [MIM:230800] have very high plasma levels of CHIT1, and this can be used as diagnostic aid and to evaluate the success of treatment. Successful therapy brings the CHIT1 activity levels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SIMILARITY: Belongs to chitinase class II (family 18 of glycosyl hydrolases).
SIMILARITY: Contains 1 chitin-binding type-2 domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 -i- SUBCELLULAR LOCATION: Secreted. Detected at lower levels in lung.
-!- SIMILARITY: Belongs to chitinase class II (family 18 of glycosyl hydrolases).
-!- SIMILARITY: Contains 1 chitin-binding type-2 domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903 (2002).

-!-FUNCTION: Degrades chitin and chitotriose. May participate in the defense against nematodes and other pathogens.
-!-CATALYTIC ACTIVITY: Hydrolysis of the 1,4-beta-linkages of N-acetyl-D-glucosamine polymers of chitin.
-!-SUBCELLULAR LOCATION: Secreted (Probable). Isoform 2 and isoform 3 lack the signal sequence and are cytoplasmic.
-!-ALTERNATIVE PRODUCTS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SWART; SM00494; ChtBb2; 1. To centrus—associated oviducal protein.";

Reprod. Fertil. Dev. 8:305-310(1996.

- FUNCTION: Binds to cocyte Sona pellucida in vivo. May play a role

in the fertilization process and/or early embryonic development.

- INDECLIDIAR LOCATION: Secretory granules.

- SUBCELIDIAR LOCATION: Secretory granules.

- TISSUE SPECIFITY: Oviduct.

- DEVELOPMENTAL STAGE: Levels are highest in the fimbria and ampulla at estrus and on day 1 of pregnancy, when gamete transport and fertilization occurs in the E2-dominated fallopian tube. Levels decline significantly on day 2 and undergo a further significant

"Molecular cloning and characterization of an estrogen-dependent porcine oviductal secretory glycoprotein.";
Biol. Reprod. 55:1305-1314 (1396).
-: FUNCTION: Binds to cocyte zona pellucida in vivo. May play a role in the fertilization process and/or early embryonic development.
-: SUBCELLULAR LOCATION: Secretory granules.
-: TISSUE SPECIFICITY: Oviduct.
-: SIMILARITY: Belongs to family 18 of glycosyl hydrolases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           2 IKRDHNDYSKNPMRIVCYVGTWSVYHKVDPYTI---EDIDPFKCTHLMYGFAKIDEYKYTI
